

POSSIBLE FIRE AVERTED

Recently a No-Burn® Dealer applied Wood Gard® to a 120,000 square foot multi-family structure. Over the weekend, the Contractor strung lights down the hallways for safety purposes and strung one set too close to the wood studs. The pictures below are an accurate depiction of what occurred. There are large char marks but no fire ignited. NBI and the Dealer, as well as the building owner, firmly believe that if the Wood Gard® had not been used this particular structure, it would not be there today.

It is not often that we are able to show what No-Burn® Products are capable of, in real life situations, but in this case folks, you can take this one to the bank, and fortunately no one was injured or died. It's there for you to talk about and show, in black and white, what can happen, and what did happen. Our products help save lives!
