

NO-BURN® TREATS ARKANSAS HOME FOR *EXTREME MAKEOVER: HOME EDITION*

AIRED AUGUST 7, 2005 ON ABC TV

Over ten years ago, Colleen Nick and her three children traveled to Alma, Arkansas, to watch their friend's son play in a little league game at a brand new ballpark. Several innings into the game, six-year-old Morgan was bored and asked her mom if she could join her friends in catching fireflies. That was the last time Colleen Nick saw her eldest daughter; Morgan suddenly vanished. Despite a massive manhunt, Morgan was not found and ten years later she is still missing, though the investigation remains open.

At the time, the Nick family was living 30 minutes away from Alma. Law enforcement officials advised Colleen to stay near the abduction site, so she bought the only house in Alma that she could afford - going to all lengths to be near the last tangible trace of Morgan.

This tragedy has inspired Colleen to start the Morgan Nick Foundation (MNF), which works tirelessly with law enforcement officials and parents to provide education designed to prevent abduction. Colleen is committed to making sure that other families don't have to wait ten years (or more) for answers, and was instrumental in the Arkansas State Legislature's passage of the Morgan Nick Amber Alert Program.

The Nick's three-bedroom, 1512-square-foot ranch style home was recently flooded due to the explosion of their old water heater, resulting in all of the floors having to be ripped out. It's been tough; Colleen devotes all of her time and energy to her remaining children, Logan (13) and Taryn (11), and to helping several thousand others nationwide.

The NO-BURN® Extreme Makeover: Home Edition Team treated the new house with the help of dealers from Little Rock and Memphis. The entire house was sprayed while it was at the lumber yard of Structural Components prior to it going to the build site. The entire house was pre-assembled at the yard to make sure everything fit, giving the NO-BURN® team a perfect opportunity to get in and spray. When the house was erected on site, the team had the opportunity to go in and touch up any areas they couldn't get before.
