TO WHOM IT MAY CONCERN

RE: No-Burn Fire Reactive System

When I began planning for the building of my 2004 Homearama Home in the East Beach Neighborhood I was interested in discovering new products that could be highlighted in my new home in this Traditional Neighborhood Development. Due to the close proximity of these houses to each other (some as close as six feet-ten feet apart), I immediately became interested in the No-Burn product as a way of providing not only a marketing edge for my home, but as a real safety feature of our home.

I contacted the local No-Burn Technology representatives for information. Their response to my inquiry was immediate and most helpful. They provided me with all of the product testing information available and met with me several times to educate me to the benefits and fire safety value of the No-Burn product.

When I decided to use the No-Burn product on my Homearama home their customer service was exceptional, adjusting their schedule without complaint to some time delays I had. Once scheduled they delivered their services efficiently and on time. We decided to add the Mih Plus mold inhibitor for added protection against mold and a third story built-in fire escape ladder for additional fire safety for my owners.

Based on the positive response of literally thousands of persons walking through our home during Homearama and talking to the No-Burn representatives at their display in our home, I predict a growing demand for this product as people look for ways to protect their homes.

I recommend No-Burn without reservation and will use again it again.
