

My name is Kevin Weidner and I would like to give a short testimonial for the products from NO-BURN.

My wife and I were building our new house in the spring of 2003. I purchased the NO-BURN Wood Gard product and applied it to my house under the directions of a NO-BURN representative. After I had applied the product to the entire house, there was an incident that arose. All of the construction people working on my house had heard of the procedure I had done to apply this product to my house. I had even gone as far as to show how well it worked by showing some of the demonstrations that were shown to me with a paper towel. Needless to say, some of the construction workers had to see with their own eyes how well this product worked.

Upon arriving at my house on April 7, 2003, to do my normal inspection to see how things were moving along, I noticed some dark markings on some of studs and headers in the upstairs area. When I looked closer, you could tell that someone had tried to burn the wood. I immediately called the supervisor to the location to show him what I had found. I took pictures of two main locations where the wood had been burned. While I was waiting for the supervisor to show up, I asked if anyone had seen what had happened. Much to my surprise, I found out when the plumbers were there sweating the pipes, they decided to take their torches to some of the wood to see how good the NO-BURN product was. I called my NO-BURN representative to ask him if I could tell how long the plumbers held their torches to the wood. He told me to do a scratch test to see how deep the burn was. When I did this test, I was able to scratch off approximately $\frac{3}{4}$ - 1 inch of charred wood. He told me that they probably had held the torches to the wood for approximately 5-7 minutes. Now imagine what would happen if you were to hold a torch to wood for that length of time under normal circumstances – combustion. With the NO-BURN product applied, the wood was able to withstand the extreme temperature and flame without catching on fire.

With me, my wife and two children living in the house, I feel much more comfortable knowing that if the unspeakable should happen and my house catch on fire, we stand a much higher chance of getting out alive. Even though there are other items that will burn in the house, it gives us greater comfort knowing we are more protected having applied NO-BURN Wood Gard. Also, it will lessen the major structural damage from occurring which in turn will make my insurance company happy. Having a fire is devastating, but with the added safety, we have “peace of mind”.

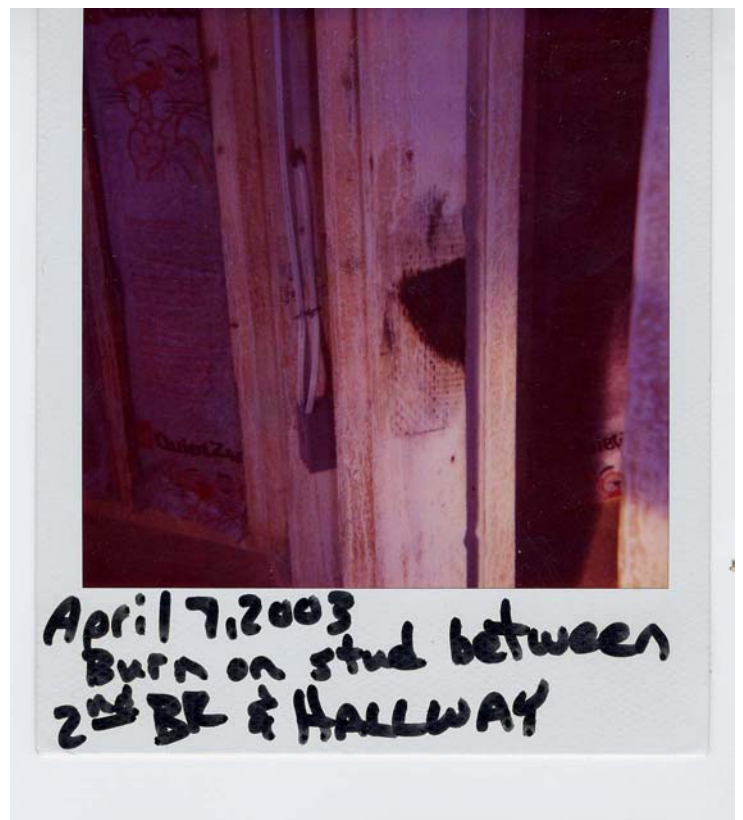

We applied the NO-BURN primer paint to all the drywall ceilings, floor and walls. We have also applied the material spray to our furnishings. This spray can be applied to most any porous material (carpets, curtains, couches, bedding, mattresses, etc.) to help prevent flame from spreading. These are a few of the wonderful products from NO-BURN we have on our home to make it safer for our children. We would like to thank NO-BURN for helping us to make our house safer and in helping us to look out for the best interest of our children.

Sincerely,

Kevin Weidner
