### **No-Burn<sup>®</sup> Announces Most Recent Membership With the Northeast Ohio Green Building Initiative**

---

It's encouraging to know Northeast Ohio companies are doing all they can to commit to their clients. With organizations like the Northeast Ohio Green Building Initiative (NEOGBI), Homeowners, Builders, Manufacturers and Suppliers possess the opportunity to prosper when the economic outlook remains unclear. As the newest member of the NEOGBI, No-Burn<sup>®</sup> has taken the initiative with visionary Builders to develop relationships to better their properties and communities with the use of zero to low voc fire retardant and reactant coatings. Membership with the NEOGBI will create recognition for the coatings and their applications to improve building sustainability and indoor air quality.

According to the NEOGBI, "*The Northeast Ohio GBI is a voluntary residential program developed by the HBA of Greater Cleveland and the North Coast BIA to promote and facilitate practical approaches to green construction.*" Being part of the local green building developments is what allows the national standards and guidelines to progress. As green building continues to motivate Consumers, Builders, Manufacturers and Suppliers alike, we are excited to be involved and active where the use of No-Burn<sup>®</sup> will contribute to the overall 'greenness' of the structures being built and the building community.

We are thankful for the continued support of local and national organizations that help promote the education of fire retardant coatings technology. It is No-Burn<sup>®</sup>'s ultimate goal to noticeably achieve building solutions through the use of our manufactured coatings. Again we graciously thank the NEOGBI and North Coast BIA for the consideration of membership and the opportunity to work with our community professionals.

No-Burn<sup>®</sup>, Inc has been leading the way in the field of fire retardant technology since 1998. By removing the fuel a fire needs to burn, these products dramatically reduce the possibility of a fire ever starting when applied over substrates such as wood, drywall, fabric, carpet, furniture, fiber-reinforced plastic and many other materials. Equally important, No-Burn<sup>®</sup> can reduce toxic smoke by as much as 80 percent. All No-Burn<sup>®</sup> products carry a “Class A” rating and are completely non-toxic and non-carcinogenic. Several No-Burn<sup>®</sup> products also offer a dual level of protection, reducing the risk of fire and inhibiting the growth of toxic-black mold. All No-Burn<sup>®</sup> products are available exclusively through a network of Dealers, certified for professional application.
