| Product Selected    | No-Burn® Wood Gard Mih   |
| Product Application | Wood Gard Mih applied to wood framing of single family residence |
| Application Method  | Airless Sprayer  |

**Project Background**

While at work on May 14, 2009, the Seilers received a call around 10:00 a.m. from their police department. They were informed that their home had caught fire. The fire originated from a surge protector in their home office, igniting near-by objects and files, which caused the fire to spread throughout the room and continued to spread to other areas of their home. Fire and smoke damage caused irrefutable damage to their home and interior furnishings. “The results of the fire were horrific. Everything inside our home was destroyed,” stated Mrs. Seiler. The Seilers were able to salvage the exterior shell of their home, but due to the damages from the fire were forced to rebuild the entire interior.

When considering their rebuild, Mrs. Seiler requested that the builder use No-Burn® on the framing. Their local No-Burn® Dealer was able to apply No-Burn® to the home’s framing during reconstruction; and through the one time spray application of Wood Gard Mih, the Seilers are better protected from both fire and mold for the life of their home. The installation of Wood Gard Mih helped the Seilers achieve a Fire Resistive Class Rating (FRCR) of 2, with product applied to the home’s framing, including: joists, studs, and roof system components.

**Value to Purchaser**

Westfield Insurance Group, the Seiler family’s homeowner insurance carrier, is able to reduce their annual homeowner’s premium by 15% because of the added fire protection provided by No-Burn® Wood Gard Mih.

After the devastating event of a fire that consumed most of their property and personal belongings, the Seilers now have peace of mind that their home is better protected from fire and mold. The Seilers are advocates for fire protection, recommending the use of No-Burn® to everyone who builds a new home.
