

Dealer	
<i>Dealer Name</i>	No-Burn® Fire Resistant Products
<i>Dealer Location & Contact Information</i>	Wooster, Ohio

Project Information	
<i>Customer Name</i>	Bogner Construction
<i>Customer Location</i>	Wooster, OH
<i>Project Location</i>	Gnaden Huttan
<i>Product Selected</i>	No-Burn® Plus
<i>Product Application</i>	Structural Insulation Panels
<i>Application Method</i>	Airless Sprayer

Project Background	
<p>A 400,000 sq. ft. warehouse needed to be sectioned off for the use of manufacturing Structural Insulation Panels (SIPs). The interior walls in the building were made up of these SIPs, which are highly combustible materials. The architect for the project has used No-Burn® on previous projects, and he recommended to have No-Burn® Plus applied to the interior panels of the warehouse.</p>	

Value to Purchaser	
<p>If the No-Burn® Product was not used, the architect would have been forced to either put drywall over the SIPs or ship the panels off and apply a fire retardant film. These two options require a lot of additional time and No-Burn® is clearly the most cost effective method. Also, adding drywall over SIPs adds an extra ½ ". No-Burn® allows building's original size to stay the same because it does not require any additional space. The divider in the building made of SIPs was designed to be able to move at any time. If drywall was used over the SIPs and they decide to move the divider, they would have been forced to tear off all of the drywall and reapply the drywall once it was in place again.</p>
