

Dealer	
<i>Dealer Name</i>	No-Burn® Northwest
<i>Dealer Location</i>	Washington

Project Information	
<i>Customer Name</i>	Storvic Park Condos
<i>Project Location</i>	Anacortes, WA
<i>Product Selected</i>	No-Burn® Plus Mih
<i>Product Application</i>	3 ft. Concealed Space Between Garage and First Floor
<i>Application Method</i>	Airless Sprayer

Project Background	
<p>The parking garage under a 4 story condo complex had a 3 foot concealed space area between the garage and the first floor that required fire protection; however, the 3 foot area did not provide enough clearance to install sprinkler heads or insulation. On the contractor's recommendation, No-Burn® Northwest presented No-Burn®'s intumescent fire reactant coatings to the building department and upon approval No-Burn® Northwest sprayed No-Burn® Plus Mih to the entire concealed space area.</p>	

Value to Purchaser	
<p>Another alternative to the sprinkler system included filling the concealed space with rockwool insulation and adding another layer of sheetrock. Installing rockwool insulation would have delayed the project, extended project schedules and demanded more labor, with the costs for installing the insulation to still be considered. No-Burn® Northwest was able to provide a solution and was the most cost effective option. Project schedules were uninterrupted and no delays were experienced due to the fact that No-Burn® Plus Mih was applied directly to the concealed areas as work continued as usual. As a field-applied coating, the advantages to use Plus Mih were noticed by the general contractor and subs throughout the construction of the Storvic Park Condos.</p>
